

Enjoy the view, without the heat

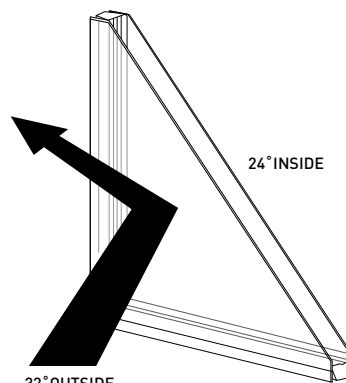

It's the perfect cold remedy too

Ordinary window glass can't handle the summer's heat and tinted glass spoils the view.

Cardinal LoE<sup>3</sup>-366<sup>®</sup>, however, has been specially formulated to reject the sun's heat without affecting the view. It lets more light in and keeps more heat out. So households and businesses remain cool and comfortable while enjoying optimum clarity.

LoE<sup>3</sup>-366<sup>®</sup> also provides exceptional fading protection.

It blocks 95% of the sun's damaging ultraviolet rays (a leading cause of fading), meaning furniture and people are protected from the damaging effects of the sun's rays.

32° OUTSIDE

24° INSIDE

By incorporating a triple layer of silver, Cardinal LoE<sup>3</sup>-366<sup>®</sup> reduces the heat gain by 64% compared to ordinary glass.

During cold weather, the insulating effect of your windows has a direct impact on how your rooms feel. Typically, 75% of the exposed surface of a window is glass, and the temperature of the room-side of the glass directly affects the air temperature in the room. Consequently, when glass surface temperature falls below 11°C, there is a risk of thermal discomfort.

To maintain the best comfort during the winter, LoE<sup>3</sup>-366<sup>®</sup> produces near constant surface temperatures, so buildings keep warm during the coldest months.
